### Career Objective

Seeking a Developer role in an organization to utilize my skill set in software development.

### Work Experience

- 3 years of experience in developing applications with multi-tier architecture using Java and related frameworks such as Spring Boot.
- Have worked in different projects collaborating closely with reputed clients and several third party vendors.
- Software developer in TCS (**2017-Present**)

### Skill Set

- Java
- Spring Boot , Microservices
- Database - SQL, PLSQL, Mongo DB

### Tools

- Git
- Docker, Kubernetes, Prometheus, Grafana
- Cloud Platforms - AWS , Azure

### Projects

- 1 **Marks & Spencer** is a leading international retail giant around the world. I'm currently working as a developer in the Customer Data Platform(CDP) team where we mainly build applications to serve as Customer Data hub by building several data pipelines from several applications and third party vendors.

#### Role:

- ◆ Designed application architecture and built applications from scratch.
- ◆ Built data pipelines, microservices and have collaborated closely with several third party vendors such as Google, Facebook and Apple for leveraging their services.
- ◆ Worked on performance tuning and enhancement of existing features.

- 2 **American Airlines** is a famous airline in America and Europe. I worked as a developer in the Hotel Meal Transportation team (HMT) where we built applications which are mainly used for providing complimentary offers of Hotel stay, Free meal and transportation to passengers in case their flights are delayed.

**Role:**

- ◆ Developed several application components as individual microservices.
- ◆ Implemented Kafka for streaming of large volumes of real time data.
- ◆ Worked on application enhancements and bug fixes.

**Area of Interest**

- ◆ Building Scalable applications
- ◆ Love to dig around open source and no code tools

**Personal Assets**

- ◆ Curious about technology
- ◆ Attention to detail
- ◆ Ability to work well in a team
